**(54)FEELING AND BODY PRESSURE CONTROL
SEAT**

(57)Abstract:

PURPOSE: To make seat operations easily performable, besides simplification in system structure, by employing a controller for controlling a pressure regulator and a distributor in combination.

CONSTITUTION: A slide support back 12, a cushion side support back 13 and a hip support back 14 are all embedded inside a cushion 1, and a back side support back 15, a lumbar support back 16 and a shoulder support back 17 are inside a back 19 as well as a head rest back 18 is in a head rest 10, respectively, while each of these backs 12-18 is connected to a distributor 29 via pipes 22-28. The distributor 29 is connected to a control panel 71 and simultaneously connected to a pressure regulator too. The control panel 71 may be controllable by means of a computer at need.
